

STAY EFFICIENT

ABOUT THE APP

Invariant is the revolutionary AMM DEX with concentrated liquidity that prioritizes capital efficiency, permissionless, and composability. Our main goal is to redefine AMM DEX stage on Solana. Great blockchain needs great projects!

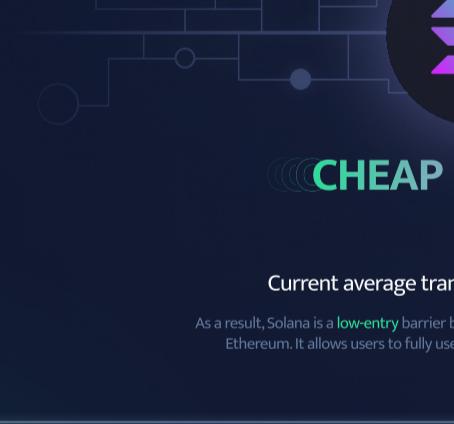

Invariant is a one of a kind platform that stands out among many ordinary exchanges

LOW FEES + **CAPITAL EFFICIENCY** → **BROAD ACTIVE LIQUIDITY** → **LOW PRICE IMPACT AND BETTER PRICE**

Competition

\$INVT TOKEN

aims to provide many benefits and increase its value along with the growth of the platform.

1. Governance

INVT tokens will allow holders to participate in governance through creating proposals and voting on existing ones.

2. Staking

Through staking the INVT token to vote which pool higher INVT inflation should go to and will be able to redeem the INVT token with a discount.

3. Revenue sharing

Holders of the INVT token will be receiving some part of the fee generated by the protocol.

TOKEN DISTRIBUTION

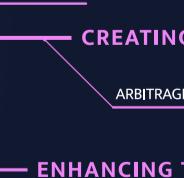

Tokens for the team will be distributed in different ways. We base on milestones:

- Total value locked (TVL)
- Volume
- Token price

The team will receive a part of the tokens with each of the targets achieved. What matters for us is efficiency and results - not time.

Solana ecosystem

CHEAP AND FAST

Current average transaction cost is **\$0.00025**.

As a result, Solana is a **low-entry** barrier blockchain, especially when we will compare it to Ethereum. It allows users to fully use the potential of the concentrated liquidity.

We have an open source, well documented code.

Our dev's with pleasure and dedication will **help other projects** with integration with our application.
